

6.24.99 email to Laura

Hydrocarbon contamination excavation work (outside of roadhouse area) begins again.

6.24.99 John Krause informed ^s me that the fact sheet was not canvased in adjacent neighbourhood but was available onsite by request during the roadhouse ^{the} area ~~Dinoseb~~ work.
follow up

Action items

SIM analysis of water samples- This is analysis for radioactive ~~analytes~~. Secor, David Taylor and I believe this analysis is not necessary. It is not likely that these contaminants will be found, there is another analysis being conducted that covers some of these ~~analytes~~. (But at a higher detection level.) fortunately, there is a long holding time for this analysis. Marcie will be sounded out on this issue in the next group telecom. I expect this analysis will be deleted.

^{or Secor find}
Region 9 lab personnel oversite of field work- This refers to the message from Mark Peterson. Without talking directly about this John Krause informed me that as of today (6.24.99) only one additional week of hydrocarbon contamination work is expected. He also requested that I ask the EPA lab if there is money/personnel to help out with addition Dinoseb work in roadhouse area. This speaks to what he would like to see as the role of the lab personnel if they come out. I have not followed up on this issue with Marcy, David Taylor or Mark Peterson.

Copies of site characterization report from 1996 Dinoseb incident- This is the material that Dan. Shane said Brian Shipley has. Brian did not go out to Duck Valley and is at present on leave. However Dan. Shane has offered to get copies from the 1996 contractor and mail them to Secor.

Next steps

John Krause will set up a group telecom early next week, once Marcie is back.

Answer it is possible ~~but~~ but is ^{remains} IAG money in question or should BIA ^{ER} pay through the OSC or outside contract
